1.2 Read the data

1.2.1 There are 42,656 lines of non-null data. Among the three branches of Disney, the California branch has the most review data.

```
[2]: disney_df = pd.read_csv("../data/raw/DisneylandReviews.csv")
disney_df
```

```
[2]:
```

	Review_ID	Rating	Year_Month	Reviewer_Location	\

1.2.2 Here are some sample review texts:

```
[6]: disney_df['Review_Text'][89]
```

```
[6]: 'Hong Kong Disneyland is definitely a must see. It is a smaller park but what it
loses in size it makes up for in quality. Hong Kong is currently home to the
only Marvel themed rides and they do not disappoint. Hong Kong has many of the
standard rides shows you expect from Disney but it also maintains a variety of
exclusives. Hong Kong also has a lot of exclusive merchandise especially pins.
Also most if not all of the rides are Bilingual. '
```

```
[7]: disney_df['Review_Text'].head(10)

     Name: Review_Text, dtype: object
```

1.3 Preprocess corpus

1.3.1 To clean the corpus (Disney review texts) for analysis, I performed the following tasks:

- Changed all the letters to lowercase.
- Ensured consistent spelling of “hongkong”.
- Replaced the abbreviation “n’t” with “not”.
- Removed all digits from the corpus.

```
[8]: corpus=''
     for i in disney_df['Review_Text']:
         corpus+=str(i)
```

```
[9]: def preprocess(corpus):
     corpus = corpus.lower()
     corpus = corpus.replace('hk', 'hongkong')
     corpus = corpus.replace('hong kong', 'hongkong')
     corpus = corpus.replace("n't", " not")
     corpus = ''.join([i for i in corpus if not i.isdigit()])
     new_corpus = ''
     for i in corpus:
         if i not in string.punctuation:
             new_corpus+=i
     return new_corpus
```

1.3.2 Lemmatization and Stemming

- Stemming is a crude method for cataloging related words, such as “boat,” “boats,” and “boating.” One of the most popular stemming tools is Porter’s Algorithm, developed by Martin Porter in 1980 in his paper titled “An algorithm for suffix stripping.” The algorithm employs five phases of word reduction (Porter, 1980).

- Lemmatization looks beyond word reduction and considers the vocabulary, part of speech, and its use in a sentence.

```
[10]: def lemmatize_stem(corpus):
    lemmatizer = WordNetLemmatizer()
    stemmer = PorterStemmer()
    new_corpus = lemmatizer.lemmatize(corpus)
    new_corpus = stemmer.stem(new_corpus)
    return new_corpus
```

1.3.3 Remove stopwords

Stopwords refer to commonly used words in a language that are often removed from text during natural language processing (NLP) tasks. These words are considered to have little or no significant meaning and are typically filtered out to focus on the more important and relevant words in a document or corpus. Examples of stopwords in English include “the,” “is,” “and,” “in,” “a,” and “an.” The removal of stopwords helps reduce noise and improve the efficiency and effectiveness of NLP tasks such as text classification, information retrieval, and sentiment analysis. I also added customized stopwords related to Disney because they appear so frequently that don’t have significant meanings.

```
[11]: print(stopwords.words("english"))
```

```
['i', 'me', 'my', 'myself', 'we', 'our', 'ours', 'ourselves', 'you', "you're",
"you've", "you'll", "you'd", 'your', 'yours', 'yourself', 'yourselves', 'he',
'him', 'his', 'himself', 'she', "she's", 'her', 'hers', 'herself', 'it', "it's",
'its', 'itself', 'they', 'them', 'their', 'theirs', 'themselves', 'what',
'which', 'who', 'whom', 'this', 'that', "that'll", 'these', 'those', 'am', 'is',
'are', 'was', 'were', 'be', 'been', 'being', 'have', 'has', 'had', 'having',
'do', 'does', 'did', 'doing', 'a', 'an', 'the', 'and', 'but', 'if', 'or',
'because', 'as', 'until', 'while', 'of', 'at', 'by', 'for', 'with', 'about',
'against', 'between', 'into', 'through', 'during', 'before', 'after', 'above',
'below', 'to', 'from', 'up', 'down', 'in', 'out', 'on', 'off', 'over', 'under',
'again', 'further', 'then', 'once', 'here', 'there', 'when', 'where', 'why',
'how', 'all', 'any', 'both', 'each', 'few', 'more', 'most', 'other', 'some',
'such', 'no', 'nor', 'not', 'only', 'own', 'same', 'so', 'than', 'too', 'very',

"shouldn't", 'wasn', "wasn't", 'weren', "weren't", 'won', "won't", 'wouldn',
"wouldn't"]
```

```
[12]: stopwords_700 = pd.read_csv('stopwords.txt', header= None, delimiter = "\t")
stopwords_700 = set(stopwords_700[0])
```

```
[13]: def remove_stopwords(corpus):
        words = nltk.word_tokenize(corpus)
        stop_words = set(stopwords.words("english"))
        stop_words_customize = {'disney', 'disneyland', 'land', 'park', 'parks', '
        ↪world', 'disneyworld', 'disney world'}
        stop_words_all = stop_words.union(stopwords_700, stop_words_customize)
        new_corpus = [word for word in words if not word in stop_words_all]
        return new_corpus
```

```
[14]: new_corpus = preprocess(corpus)
        new_corpus = lemmatize_stem(new_corpus)
        new_corpus = remove_stopwords(new_corpus)
```

1.4 Most frequent words in the corpus

```
[15]: from collections import Counter
        new_disney_df = pd.DataFrame()
        new_disney_df['word'] = list(Counter(new_corpus).keys())
        new_disney_df['count'] = list(Counter(new_corpus).values())
        new_disney_df.sort_values(by=['count'], ascending=False).head(20)
```

```
[15]:
```

	word	count
10	rides	33898
24	time	28441
15	day	27421
420	ride	17498
38	great	15659
125	food	13985
161	kids	13824
83	place	13108
55	like	11868
201	see	11566
25	visit	11257
181	people	10878
214	went	10792
945	long	10086
184	fast	10001
409	pass	9690
402	wait	9565
365	back	9432
272	fun	9265
462	first	8777

1.5 WordCloud

1.5.1 Unigram WordCloud

I first generated a unigram WordCloud to visualize frequently appeared words.

```
[16]: from PIL import Image  
micky_mask = np.array(Image.open('micky.png'))
```

```
[17]: text = ''  
for i in new_corpus:  
    text+=' '  
    text+=i
```

```
[18]: wordcloud = WordCloud(stopwords = STOPWORDS,  
                           mask = micky_mask,  
                           random_state = 123,  
                           collocations=False,  
                           max_words = 100).generate(text)
```

```
[19]: wordcloud.to_file('wordcloud.png')
```

```
[19]: <wordcloud.wordcloud.WordCloud at 0x7f8e88431760>
```

```
[20]: from IPython.display import Image, display  
display(Image(filename='wordcloud.png'))
```

3 random reviews with the positive sentiment polarity:

['disneyland was very nice but differant from florida. still great experiance, did not stay here but wished we did']

["i am in my early 60's. the time when television was introduced to the world as i was a toddler. i grew up with disneyland and th ecastle that seems to open the imagination to the real world. i have on my many visits to california visited disneyland and always seem to be taken back to my childhood, but at the same time be escorted through the generations with the always evolving focus of the disney management and development team, right up to my last visit a few years ago, which was also fantastic as also my many visits to disneyworld in florida.

unfortunately on our trip to california in less then 2 weeks we have not time to stay over to visit disneyland and see the developments since our last visit, but hope to visit once again disneyworld, etc when in florida for the almost 2 weks we are there. simply if you want to be taken on a ride of the mind, body and spirit, allow a little time for the disney universe to share what they have. it will be worth it not just for now, but for a future time of reflection of something very special in your life.. greg keyes"]
 ['although not as big as the other disney parks (not even paris), we had a lovely day here. all the usual disney refinements were here and if you used the metro you could be on a train carriage with mickey mouse windows. my son loved it.']

```
[31]: print('3 random reviews with the negative sentiment polarity: \n')
neg_review = disney_df.loc[disney_df.polarity < 0, ['Review_Text']].sample(3).
        ↪values
for review in neg_review:
    print(review)
```

3 random reviews with the negative sentiment polarity:

['if you can be there when the park opens, do it. ride the most popular rides before the crowds get too bad. the park will get crowded and your options will narrow as the lines get longer. you might consider going back to the hotel to play in the pool or nap during the middle of the day and return refreshed for the late afternoon and evening.']
 ["i'm an annual passholder and every time i go to any other theme park i always end up wanting to go back to dl. nobody does it like them."]
 ['we went on a road trip for a few days over the half term break which included 2 1 2 days in disney. a family group of 8, ranging from 8 months to 56, there really was something for everyone. only thing i would say is that starting at 8am with a character breakfast meant it was a long time until fireworks at 11pm; especially for children. we all took a break in the afternoon but even so only 3 made it to 11pm.']

1.6.2 Using NLTK VADER

- Valence Aware Dictionary for Sentiment Reasoning (VADER) is a model used to analyze the sentiment of text that are sensitive to polarity and emotional intensity (Hutto, 2015)
- NLTK has a direct implementation of the VADER model.

```
[32]: sid = SentimentIntensityAnalyzer()
```

```
[33]: disney_df['NLTK_polarity'] = disney_df['Review_Text'].map(lambda text: sid.
        ↪polarity_scores(text)['compound'])
```

```
[34]: disney_df.head(10)
```

```
[34]:
```

3 random reviews with the positive sentiment polarity using NLTK:

```
['disneyland offers an experience that takes you back in time to some of your
most beloved classics while also mixing in some of the newer hits. disneyland,
california adventure park, and downtown disney are all side by side so two days
is plenty to take it all in!']
['i absolutely loved hongkong disneyland. i have been to disneyland in la twice
and while it is small in comparison, i still had an awesome time here. people
had told me not to expect much from this disneyland, but they were wrong.the
lines were extremely reasonable & the rides were a lot of fun. i would highly
recommend those travelling with children come here, it is a great, more relaxed
```

version of la.please visit!']

["there is nothing to dislike. i had a great time at both parks. loved the fireworks display and the 'world of colour' water feature."]

```
[38]: print('3 random reviews with the negative sentiment polarity using NLTK: \n')

        sample(3).values
for review in neg_review_NLTK:
    print(review)
```

3 random reviews with the negative sentiment polarity using NLTK:

['disneyland happiest place on earth? well hongkong disney is a bit of a disappointment.to start with getting into the place takes 30 minutes as they have to check every single bag. when you have thousands waiting to get in, then the queues they provide is certainly not enough. imagine having kids excitedly wanting to get in, only to have to queue at the front entrance for 30 45 minutes.also if you did not buy your tickets online, you will also have to queue to purchase the tickets first. lucky we bought ours online, but the ticket printing machine printed only 5 of our tickets when we have bought 6.the hongkong disney is smaller than the us disney, so there are fewer rides and less things to do once you are in the park.most of the rides require at least 30 minutes of waiting time. on the day we were there, the weather bureau issued a typhoon 3 warning, and as a result they shut down all the outdoor rides. however during the entire day we were there, there was hardly a breeze. the management should be a bit more flexible and reopen some of the rides as there was no risk or danger. the only plus is that the lion king show is worth a visit. also you can buy disney merchandise at the hongkong international airport so if you must get the disney toys, there is an alternative.also food and drinks are very expensive in there. another minus is the some of the visitors from the mainland have no clues on what a queue is and their children just cut into the queues. save your money and go to other disneyland if you must.']

["myself and my partner have dreamt for years of coming to disneyland paris together for halloween. we are a young hard working couple and saved for over a year to be able to afford our dream trip. we booked the full disney package in august 2018 (flights, magical shuttle, hotel, park tickets and full board dining plan) and could not wait to arrive for halloween week.the problems started the second we landed at paris cdg airport when our not so magical shuttle bus was no where to be found. after waiting an hour outside the airport at the shuttle stop, we decided to ring the hotel (disney santa fe) to find out where it was. it was only at this point we were informed that the shuttle stopped at 8pm (which makes me think why did they allow us to book and pay for this, knowing our flight arrived after this time). the hotel assured us they would fully refund our taxi when we arrived which cost 64euros. turns out we had to file for a refund request which can take 15 working days to get a response from. as we were on the full board dining plan, we only brought 80euros with us as extra spends for shops etc. this therefore left us with 16euros for the next 4 days.it was 10pm when we arrived at our hotel. luckily the canteen was open until

10.30pm, so we were able to pop in for a bite to eat with our dining plan. when checking in, we were told all blocks had coffee and vending machines, however once we got to our room, they were all 'out of order', and remained that way for the entire stay. on our first morning we decided to visit the disneyland parc, all in all we had a fairly enjoyable day. however the hyperinflation of guests was unbearable to say the least. queue times were ridiculous, with some being up to 90 minutes long for a 2 minute ride. throughout the day me and my partner ate exactly the same meal until the evening when we ate at the hukuna matata restaurant. i had the meatballs, and he had chicken strips. all seemed fine at the time until the next morning when he became incredibly ill, from what seems to be minor food poisoning. this set us back for our entire 2nd day (halloween). in the evening of halloween, my parter decided some fresh air might do him some good, so we headed down to the disneyland parc to try and enjoy the halloween party the one thing we came to experience. once we got to the gates we showed our magic pass, only to be denied access! not once were we informed that this was an additional expense and we could not enter the park without a prepaid wristband. we were then forced to spend the entire evening sat in our hotel room. we ca not comment on the price of food as we were full board, however we have seen many families have to pay out over 80euros for a few sandwiches and drinks. we have not had any issues with the staff, and were actually susprised at how accomodating they are to english guests. we are writing this whilst sat in the hotel room on our 3rd day. we did go into the disneyland parc this morning however we just had to leave due to the amount of people they had managed to cram in through the gates. there was no chance of getting on any ride without having to queue for over an hour in the rain. we even had to queue to leave the park! all in all it feels that the individual is not valued in disney anymore. it just seems to be about getting as many people in and making as much money as possible. i think old walt disney himself would be looking down in dissapointment. looking forward to going home tomorrow!"]

["well i have to say very disappointing after going to disney in florida and paris many times. the staff were not nearly as nice and helpful .we had a meal which was awful something i have never had to say about disney .it was so packed for a small park and not nearly the same choice in places to eat and rides to go on the disney castle was so disappointing .well it's back to florida and paris where they have it spot on ."]

1.6.3 TextBlob vs NLTK VADER

Similarities

- In total, 38,800 (about 90% of the data set) polarity scores obtained by using TextBlob and NLTK VADER indicate the same polarity (positive / negative).
- Both methods are lexicon-based. In the lexicon approach, words are mapped to sentiment, and the overall sentiment of a sentence is determined by aggregating the sentiment of each individual term.
- Lexicon sentiment analysis produces a polarity score ranging from -1 to 1, where -1 indicates highly negative sentiment and 1 indicates highly positive sentiment. A value close to 0 indicates a neutral sentiment.

Differences

- In total, 3,856 (about 10% of the data set) polarity scores obtained by using TextBlob and NLTK VADER indicate the same polarity (positive / negative).
- VADER is specifically designed for analyzing social media content. As a result, VADER dedicates significant effort to identify sentiments in content commonly found on social media platforms, including emojis, repetitive words, and punctuation marks (such as exclamation marks).

Finding I investigated the reviews on which TextBlob and NLTK VADER disagreed by drawing random samples. These reviews contain both negative and positive sentiments, which could be the reason why the two methods cannot agree on the overall sentiment.

3 random reviews with different sentiment by TextBlob and NLTK Vader:

['queues were not too busy and kids got to go on everything they wanted to except thunder mountain which broke down 2 in the one day, once when we were nearly at the front of the queue and a 2nd time later that day. staff did not keep anyone informed on what was going on and a lot of people where left queuing not knowing there was a problem.']

["our like the entire experience. we are disneyholics. lost count how many times we've been. dislike rude, impatient people. it's disney, ca not we all just have fun :)"

["my wife and i only have one day at each park. so i booked us this tour for the morning of our disneyland park day.we did not have a magical time. we had a pretty slow group and we only got to go on 3 rides during our tour. the tour went from 9:45 (people showed up late and we we told to be there at 9:15) until after 2pm. over four hours and only three rides.i knew most of the history already so the tour itself was not that great for me. when this would be worth it:*if you have at least 3 days in the parks or come here regularly throughout the year.*if you come regularly and want a se disney pin*if you want a relaxing day and do not care about rides or waiting for things.*you really want to see inside the dream suitewhen this is not worth it:*if you only have one day per park. we missed out on a bunch of rides because the length of the tour.*if you love rides and do not really care that much about history*if you have kids. kids we were with hated is and were so bored.we did not even go near club 33 and did not see walt's apt or ride in the train.long story short...i liked the tour in general (because i love all things disney) but it wasted a lot of our day and we

missed a bunch of rides because of it...oh, and we went in early nov when the crowds are much lighter..."]
